HEALTH SPA PIEŠŤANY

## HEALTH SPA PIEŠŤANY

Our health spa offers the very best, effective therapies to treat musculoskeletal conditions for guests from across the globe. We use our unique natural resources; curative thermal water and sulphuric mud, combining them with first class manual treatments and therapeutic rehabilitation services. Our highly qualified team of specialised doctors and professional medical personnel are on hand to oversee our complex spa stays and treatments.

### SULPHURIC MUD OF PIEŠŤANY

This mud contains a unique live eco-system, and is famous around the world thanks to its healing characteristics. The mud is taken from a still branch of the River Váh on the site of sulphurous thermal mineral water springs. After the mud is extracted from the bypass arm of the river, it matures for at least one year in special mud-pools where sulphurous thermal water is added to enrich the mixture with mineral substances. The mature mud has a butter-like, greasy consistency, it is very malleable, with good heat conducting features, cooling down four times slower than water. Its colour is steel bluish or even black. It is applied on the body surface at the temperature of around 45°C (ranging from 44° - 46°C).

### MUD POOL

Is a pool consisting of thermal mineral water and a natural bottom of 10 to 30 cm of sulphuric mud. Thermal mineral water springs seep into the pool through the mud, the water surface reaching to around 50 – 90 cm above the sulphuric mud. The temperature of thermal mineral water is around 39° - 40°C; and guests generally stay in the water for around 10 minutes, depending on the recommendations of the doctor who prescribes the treatment after a thorough

medical check. The treatment ends up with a shower and subsequent dry pack.

### LOCAL OR FULL-BODY MUD PACKS

A mud pack helps reduce swellings in joint areas, reduces muscular tension, improves nutrition of cartilages, connective tissues and inter-vertebral discs. It increases antiinflammatory activity and immunity processes in the body, improves the functions of cartilages, connective tissues and mobility of the joints.

### PARAFANGO PACK

is a form of local heat application. It is prepared from a mixture of the Piešťany mud, paraffin and paraffin oil. It helps relieve spasms and muscle contractions, improves blood circulation, promotes the healing of tissues and has an anti-pain effect.

### PELOIDTHERAPY FOR HANDS

The treatment combines manual therapy and the mud of Piešťany. The exercises are focused on the hands which are immersed in a mud container. The treatment helps blood circulation in the hands, relieves stress in the tissues and has an anti-pain effect multiplied by the absorption of mineral substances from the sulphuric mud.

### **THERMAL MINERAL WATER OF PIEŠŤANY**

is natural healing water at a temperature ranging from 67° to 69°C. It is medium-mineralised, sulphate bicarbonate, calcareous sodium water containing the curative hydrogen sulphide and other mineral substances. Our thermal water is used mainly for baths and drinking-treatments.

### **THERMAL BATH (MIRROR POOL)**

is a pool with an artificial bottom filled with natural sulphuric thermal mineral water at a temperature of 36° - 37°C or 38° - 39°C, where the guest is submerged up to his/her arms or alternatively sits comfortably around the pool. A bath lasts from 10 to 20 minutes on average. The treatment ends with a dry wrap.

### **INDIVIDUAL THERMAL MINERAL BATH**

makes use of the absorption and effects of the sulphur and minerals through the skin, joints and connecting tissues. It reduces the blood pressure, dilates the blood vessels and reduces the free oxygen radicals. The bath has an overall relaxing and calming effect. The temperature of the sulphuric bath usually ranges from 36° to 38°C and ends up with a 15-minute dry wrap.

### **INDIVIDUAL THERMAL BUBBLE BATH**

consists of a mineral water bath at a temperature of 36° - 37°C using compressed air rising from a grate on the bottom of the tub.

The bath has a soothing effect and is suitable for insomnia and other stress related problems.

### **WHIRLPOOL**

is a gentle massage using whirling water, either through its partial application on the upper or lower extremities or in the form of a total body massage in a tub at a temperature of 36°-37°C. It contributes to a better flow of blood circulation to the extremities; it relieves muscular and joint stiffness.

### **SCOTTISH SPRAYS**

are a very intense and strong stimulating treatment where the guest is standing whilst a pressurised (3 atm) water jet is directed to the body from a distance of three or four metres. The treatment ends up with a cold shower. Scottish sprays help improve the immune system, blood circulation and metabolism and leave the guest with an overall feeling of rejuvenation.

### **PARTIAL MEDICAL MASSAGE**

is conducted by therapists trained in special medical massage techniques. It stimulates drainage of surface veins and lymphatic vessels, helps relieve the skin tensions, improves blood circulation, absorption of swellings and haemorrhages, relaxes and strengthens the muscles and moderates pains.
